# 3500/42M Proximitor Seismic Monitor Datasheet

Bently Nevada Machinery Condition Monitoring

143694 Rev. V

**( E )** (E x)

## **Description**

The 3500/42M Proximitor Seismic Monitor:

- Protects machinery by continuously comparing monitored parameters against configured alarm setpoints to drive alarms.
- Communicates essential machine information to both operations and maintenance personnel.

The 3500/42M Proximitor Seismic Monitor is a four-channel monitor that accepts input from proximity and seismic transducers. It conditions the signal to provide vibration and position measurements and compares the conditioned signals with user-programmable alarms.

You can program each channel using the 3500 Rack Configuration Software to monitor and report:

- Radial vibration
- REBAM
- Thrust position
- Differential
- Shaft absolute

Circular acceptance region

**Bently Nevada** 

a Baker Hughes business

Acceleration

- expansion Eccentricity
- Velocity

The monitor channels are programmed in pairs and can perform up to two of the listed functions at a time. For example, Channels 1 and 2 can perform one function while channels 3 and 4 perform another or the same function.

Each channel, depending on configuration, typically conditions its input signal to generate various parameters called static values. You can configure alert setpoints for each active static value and danger setpoints for any two of the active static values.

## Specifications

## Inputs

| Signal               | Accepts from 1 to 4 proximity,<br>velocity or acceleration<br>transducer signals |  |
|----------------------|--|--|
| Power<br>consumption | 7.7 watts, typical   |  |
| Input Impedance      |  |  |
| Standard I/O         | 10 kΩ<br>(Proximitor and acceleration<br>inputs)                                 |  |

## Sensitivity

| Radial Vibration                    | 3.94 mV/µm (100 mV/mil) or<br>7.87 mV/µm (200 mV/mil)   |  |
|-------------------------------------|---|--|
| Thrust                              | 3.94 mV/μm (100 mV/mil) or<br>7.87 mV/μm (200 mV/mil)   |  |
| Eccentricity                        | 3.94 mV/μm (100 mV/mil) or<br>7.87 mV/μm (200 mV/mil)   |  |
| Differential<br>Expansion           | 0.394 mV/μm (10 mV/mil) or<br>0.787 mV/μm (20 mV/mil)   |  |
| REBAM                               | 40 mV/μm (1000 mV/mil) or<br>80 mV/μm (2000 mV/mil)   |  |
| Acceleration & Acceleration2        | 10 mV/ (m/s2) (100 mV/g)  |  |
| Velocity &<br>Velocity2             | 20 mV/ (mm/s) pk (500 mV/<br>(in/s) pk) or<br>5.8 mV/ (mm/s) pk (145 mV/<br>(in/s) pk) or<br>4 mV/ (mm/s) pk (100 mV/ (in/s)<br>pk) |  |
| Shaft Absolute,<br>Radial Vibration | 3.94 mV/μm (100 mV/mil) or<br>7.87 mV/μm (200 mV/mil)   |  |
| Shaft absolute,<br>Direct           | 3.94 mV/μm (100 mV/mil) or<br>7.87 mV/μm (200 mV/mil)   |  |
| Shaft absolute,<br>Velocity         | 20 mV/ (mm/s) pk (500 mV/<br>(in/s) pk) or<br>5.8 mV/ (mm/s) pk (145 mV/<br>(in/s) pk) or<br>4 mV/ (mm/s) pk (100 mV/ (in/s)<br>pk) |  |
| Circular<br>Acceptance<br>Region    | See Radial Vibration on the next page.  |  |

## Outputs

| Front Panel LEDs                   |   |  |  |
|------------------------------------|---|--|--|
| ok led                             | Indicates when the 3500/42M<br>Proximitor Seismic Monitor is<br>operating properly.                                   |  |  |
| TX/RX LED                          | Indicates when the 3500/42M<br>Proximitor Seismic Monitor is<br>communicating with other<br>modules in the 3500 rack. |  |  |
| Bypass LED                         | Indicates when the 3500/42M<br>Proximitor Seismic Monitor is in<br>Bypass Mode.                                       |  |  |
| Buffered Transducer                | The front of each monitor has one coaxial connector for each channel.   |  |  |
| Outputs                            | Each connector is short-circuit protected.  |  |  |
| Output Impedance                   | 550 Ω   |  |  |
| Transducer Power<br>Supply         | -24 Vdc   |  |  |
| Recorder                           | +4 to +20 mA<br>Values are proportional to<br>monitor full-scale.   |  |  |
|                                    | The monitor provides<br>individual recorder values for<br>each channel.   |  |  |
|                                    | Monitor operation is<br>unaffected by short circuits on<br>recorder outputs.  |  |  |
| Voltage                            | 0 to +12 Vdc range across load  |  |  |
| Compliance<br>(current output)     | Load resistance is 0 to 600 Ω.  |  |  |
| Resolution                         | 0.3662 µA per bit<br>±0.25% error at room<br>temperature<br>±0.7% error over temperature<br>range                     |  |  |
|                                    | Update rate approximately 100<br>ms or less   |  |  |
| Shaft Absolute<br>Buffered Outputs | The Shaft Absolute I/O<br>modules have one output for<br>each channel group.  |  |  |
|                                    | Each output is short-circuit protected.   |  |  |
| Shaft Absolute<br>Output Impedance | 300 Ω   |  |  |
| Output supply parameters           | See Output Supply Parameters<br>on page 9   |  |  |

## Signal Conditioning

Specified at +25 °C (+77 °F) unless otherwise noted.

## **Radial Vibration**

ø)

| Frequency Response         |  |  |
|----------------------------|--|--|
| Direct filter              | User-programmable<br>Single-pole<br>-3db at 4 Hz to 4000 Hz or<br>1 Hz to 600 Hz<br>±1% accuracy                 |  |
| Gap filter                 | -3 dB at 0.09 Hz   |  |
| Not 1X filter              | 60 cpm to 15.8 times running<br>speed<br>Constant Q notch filter<br>Minimum rejection in stopband<br>of -34.9 dB |  |
| Smax                       | 0.125 to 15.8 times running speed  |  |
| 1X and 2X vector<br>filter | Constant Q Filter<br>Minimum rejection in stopband<br>of -57.7 dB  |  |

1X and 2X Vector, Not 1X, and Smax parameters are valid for machine speeds of 60 cpm to 60,000 cpm.

| Accuracy       |   |
|----------------|---|
| Direct and Gap | Exclusive of filtering<br>Within ±0.33% of full-scale<br>typical<br>±1% maximum                       |
| 1X and 2X      | Within ±0.33% of full-scale<br>typical<br>±1% maximum   |
| Smax           | Within ±5% maximum  |
| Not 1X         | ±3% for machine speeds less<br>than 30,000 cpm<br>±8.5% for machine speeds<br>greater than 30,000 cpm |

## **Thrust and Differential Expansion**

| Accuracy           | Within ±0.33% of full-scale<br>typical<br>±1% maximum |  |
|--------------------|---|--|
| Frequency Response |   |  |
| Direct filter      | -3 dB at 1.2 Hz                                       |  |
| Gap filter         | -3 dB at 0.41 Hz                                      |  |

## **Eccentricity**

| Accuracy           | Within ±0.33% of full-scale<br>typical<br>±1% maximum |  |
|--------------------|---|--|
| Frequency Response |   |  |
| Direct filter      | -3 dB at 15.6 Hz                                      |  |
| Gap filter         | -3 dB at 0.41 Hz                                      |  |

#### Acceleration

| Accuracy       | Within ±0.33% of full-scale<br>typical<br>±1% maximum<br>Exclusive of filters |
|----------------|---|
| Filter Quality |   |
| High-pass      | 4-pole<br>(80 dB per decade, 24 dB per<br>octave)                             |
| Low-pass       | 4-pole<br>(80 dB per decade, 24 dB per<br>octave)                             |

# Table 1: Frequency Ranges if Both Channelsof a Channel Pair are Enabled

| Dual Channel Frequency Response |                       |                                  |                     |
|---------------------------------|-----------------------|----------------------------------|---------------------|
| Output Type                     | Without<br>Filter     | Low or<br>High<br>Pass<br>Filter | With<br>Integration |
| RMS                             | 10 to<br>30,000<br>Hz | 10 to<br>9,155<br>Hz             | 10 to 9,155 Hz      |
| Peak                            | 3 to<br>30,000<br>Hz  | 3 to<br>9,155<br>Hz              | 10 to 9,155 Hz      |

## Table 2: Frequency Ranges if a SingleChannel of a Channel Pair is Enabled

| Single Channel Frequency Response |  |                     |  |
|-----------------------------------|--|---------------------|--|
| Output Type                       | Without Filter<br>Low or High<br>Pass Filter | With<br>Integration |  |
| RMS                               | 10 to 30,000 Hz                              | 10 to 14,500 Hz     |  |
| Peak                              | 3 to 30,000 Hz                               | 10 to 14,500 Hz     |  |

## **Acceleration II**

| Accuracy                   | Within ± 0.33% of full scale<br>typical<br>± 1% maximum<br>Exclusive of filters |  |  |
|----------------------------|---|--|--|
| Filter Quality             |   |  |  |
| High-pass                  | 4-pole<br>(80 dB per decade, 24 dB per<br>octave)                               |  |  |
| Low-pass                   | 4-pole<br>(80 dB per decade, 24 dB per<br>octave)                               |  |  |
| Frequency Response         |   |  |  |
| Bias filter                | -3 dB at 0.01 Hz  |  |  |
| Not OK filter              | -3 dB at 2400 Hz  |  |  |
| 1X and 2X vector<br>filter | Valid for machine speeds of 60 cpm to 100,000 cpm                               |  |  |
|                            |   |  |  |

## Table 3: Frequency Ranges for the 3500/42MProximitor Seismic Monitor under Different **Options using the Acceleration II Channel** Туре

| Frequency Ranges |  |                     |  |
|------------------|--|---------------------|--|
| Output Type      | Without Filter<br>Low or High<br>Pass Filter | With<br>Integration |  |
| RMS              | 10 to 30,000 Hz                              | 10 to 20,000 Hz     |  |
| Peak             | 3 to 30,000 Hz                               | 10 to 20,000 Hz     |  |

## Velocity and Velocity II

| Accuracy                                      | Within ±0.33% of full-scale<br>typical<br>±1% maximum<br>+1% -3% with MTL 764(-) Zener<br>External Barrier<br>Exclusive of filters   |
|---|--|

| Circular<br>acceptance<br>region | See Radial Vibration on page 3 |

#### REBAM

| Frequency Response |   |
|--------------------|---|
| Spike              | User-programmable<br>from 0.152 to 8678 Hz  |
| Element            | User-programmable for BPFO<br>ranging from 0.139 to 3836 Hz   |
|                    | High-pass corner is 0.8x BPFO.<br>Low-pass corner is 2.2x BPFO.   |
| Rotor              | User programmable from 0.108<br>to 2221 Hz  |
| Direct             | Programmable from 3.906 to 14.2<br>Hz   |
|                    | Selection is determined by Spike<br>and Rotor filters.  |
| Gap                | Programmable from 0.002 to 1.0<br>Hz  |
|                    | Selection is determined by the Rotor filter.  |
| 1X vector filter   | The range of shaft speeds for<br>which the value is valid depends<br>on the nominal shaft speed for<br>which the channel is configured. |

# Table 4: Summary of the Relationshipbetween Nominal Shaft Speed and the ValidSpeed Range

| Nominal Shaft<br>Speed (Hz) | Valid Speed Range (Hz) |
|-----------------------------|------------------------|
| 10 to <126                  | 0.071 to 160           |
| 126 to <252                 | 0.133 to 330           |
| 252 to <504                 | 0.25 to 660            |
| 504 to 584                  | 0.50 to 750            |

If a multi-event gear or speed wheel generates the speed input, the upper

limitation of the resultant input signal is approximately 20 KHz.

| Filter Quality             |   |
|----------------------------|---|
| Spike high-pass            | 6-pole Elliptic<br>(155 dB per decade, minimum)                       |
|                            | Corner frequency is -0.1 dB.  |
| Element                    | 8-pole Butterworth<br>(155 dB per decade minimum)                     |
| bandpass                   | Corner frequency is -3 dB.  |
| Rotor low-pass             | 6-pole Elliptic<br>(155 dB per decade, minimum)                       |
|                            | Corner frequency is -0.1 dB.  |
| Rotor, direct high-        | 1-pole Butterworth<br>(18 dB per decade, minimum)                     |
| pass                       | Corner frequency is -3 dB.  |
| Spike, direct low-<br>pass | Corner is -0.3 dB maximum.  |
| Gap low-pass               | 1-pole Butterworth<br>(18 dB per decade, minimum)                     |
|                            | Corner frequency is -3 dB.  |
|                            | Constant Q of 16.67   |
| 1X amplitude               | Stopband frequencies are 0.91<br>and 1.09 times the running<br>speed. |
|                            | Stopband attenuation is -51 dB<br>minimum.                            |

| Accuracy            |   |
|---------------------|---|
|                     | Within ±0.33% of full scale typical   |
| Amplitude           | ±1% maximum when input signal<br>is at the center frequency of the<br>measured value's passband                                   |
| Phase               | 3 degrees error, maximum  |
| Channels<br>enabled | You can use certain<br>configurations to enable only<br>one channel of a channel pair.<br><u>See REBAM Channels on page 17.</u> . |

| Filter Tracking / Stepping (Requires a valid speed signal) |   |
|--|---|
| Initial condition  | Nominal filter set used                               |
| Switch from<br>nominal to lower<br>filter set              | Current shaft speed ≤ 0.9 x<br>(nominal shaft speed)  |
| Switch from lower<br>to nominal filter<br>set              | Current shaft speed ≥ 0.95 x<br>(nominal shaft speed) |
| Switch from<br>nominal to higher<br>filter set             | Current shaft speed ≥ 1.1 x<br>(nominal shaft speed)  |
| Switch from<br>higher to nominal<br>filter set             | Current shaft speed ≤ 1.05 x<br>(Nominal Shaft Speed) |
| Shaft speed error condition                                | Nominal filter set used                               |

## Physical

| Monitor Module (Main Board)               |  |  |
|---|--|--|
| Dimensions<br>(Height x Width x<br>Depth) | 241.3 mm x 24.4 mm x 241.8 mm<br>(9.50 in x 0.96 in x 9.52 in) |  |
| Weight                                    | 0.91 kg (2.0 lb)   |  |
| I/O Modules (no                           | n-barrier)   |  |
| Dimensions<br>(Height x Width x<br>Depth) | 241.3 mm x 24.4 mm x 99.1 mm<br>(9.50 in x 0.96 in x 3.90 in)  |  |
| Weight                                    | 0.20 kg (0.44 lb)  |  |
| I/O Modules (barrier)                     |  |  |
| Dimensions<br>(Height x Width x<br>Depth) | 241.3 mm x 24.4 mm x 163.1 mm<br>(9.50 in x 0.96 in x 6.42 in) |  |
| Weight                                    | 0.46 kg (1.01 lb)  |  |

## **Rack Space Requirements**

| Monitor     | 1 full-height front slot |
|-------------|--------------------------|
| I/O Modules | 1 full-height rear slot  |

## **Barrier Parameters**

The following parameters apply to CSA-NRTL/C and ATEX approvals.

| Proximitor Barrier    |  |
|-----------------------|--|
| Circuit<br>Parameters | Vmax (PWR) = 26.80 V<br>(SIG) = 14.05 V<br>Imax (PWR) = 112.8 mA<br>(SIG) = 2.82 mA Rmin |

|                                   | (PWR) = 237.6 Ω<br>(SIG) = 4985 Ω   |  |
|-----------------------------------|---|--|
| Channel<br>Parameters<br>(entity) | Vmax = 28.0 V<br>Imax = 115.62 mA<br>Rmin (PWR) = 237.6 Ω<br>(SIG) = 4985 Ω |  |
| Seismic Barrier                   |   |  |
| Circuit<br>Parameters             | Vmax (PWR) = 27.25 V<br>Imax (PWR) = 91.8 mA<br>Rmin (PWR) = 297 Ω          |  |
| Channel<br>Parameters<br>(entity) | Vmax = 27.25 V<br>Imax = 91.8 mA<br>Rmin (PWR) = 297 Ω                      |  |

## Alarms

| Use Rack Configuration Software<br>to set alert levels for each value<br>measured by the monitor and<br>danger setpoints for any two of<br>the values measured by the<br>monitor.  |
|--|
| Alarms are adjustable from 0 to<br>100% of full-scale for each<br>measured value. However, when<br>the full-scale range exceeds the<br>range of the transducer, the<br>range of the transducer will limit<br>the setpoint. |
| Within 0.13% of the desired value  |
|  |

143694 Rev. V

Alarm Time Delays

| You can program alarm delays using Rack<br>Configuration Software.        |  |  |
|---|--|--|
| For all channel pair types excluding<br>Shaft Absolute Velocity and REBAM |  |  |
| Alert   | From one to 60 seconds in one second intervals                                 |  |
| Danger  | 0.1 seconds or from one to 60<br>seconds in 0.5 second intervals               |  |
| Shaft Absolute Velocity   |  |  |
| Alert   | From one to 60 seconds in one second intervals                                 |  |
| Danger  | 0.1 seconds or from one to 60<br>seconds in 0.5 second intervals               |  |
| REBAM   |  |  |
| Alert   | From the calculated minimum<br>value to 400 seconds in one<br>second intervals |  |
| Danger  | From the calculated minimum<br>value to 400 seconds in 0.5<br>second intervals |  |

## **Static Values**

Static values are measurements used to monitor the machine. The 3500/42M Proximitor Seismic Monitor returns the following static values:

| Radial Vibration  | Direct, Gap, 1X Amplitude, 1X<br>Phase Lag, 2X Amplitude, 2X<br>Phase Lag, Not 1X Amplitude and<br>Smax Amplitude   |
|---|---|
| Thrust Position Direct, Gap                                     |   |
| Differential<br>Expansion                                       | Direct, Gap   |
| Eccentricity Peak-to-peak, Gap,<br>Direct Minimum, Direct Maxir |   |
| REBAM   | Spike, Element, Rotor, Direct, Gap,<br>1X Amplitude, 1X Phase Lag   |
| Acceleration  | Direct<br>Defined as one of the following:<br>RMS Acceleration, Peak<br>Acceleration, RMS Velocity, Peak<br>Velocity, Band-pass peak<br>Acceleration, or Band-pass peak<br>Velocity |
| Acceleration II   | Direct, 1X Amplitude and 2X   |

|  | Amplitude   |
|--|---|
|  | Defined as one of the following:<br>RMS Acceleration, Peak<br>Acceleration, RMS Velocity, Peak<br>Velocity, Band-pass peak<br>Acceleration, or Band-pass peak<br>Velocity |
|  | Additionally, 1X Phase, 2X Phase<br>and Bias Voltage  |
|  | Direct  |
| Velocity   | Defined as one of the following:<br>RMS Velocity, Peak Velocity,<br>peak-to-peak Displacement,<br>Band-pass peak Velocity, Band-<br>pass, or Peak-to-peak<br>Displacement |
|  | Direct, 1X Amplitud and 2X<br>Amplitude   |
| Velocity II  | Defined as one of the following:<br>RMS Velocity, Peak Velocity,<br>peak-to-peak Displacement,<br>Band-pass peak Velocity, Band-<br>pass, or Peak-to-peak<br>Displacement |
|  | Additionally, 1X Phase, 2X Phase<br>and Bias Voltage  |
| Shaft Absolute,<br>Radial Vibration<br>and Shaft<br>Absolute, Velocity | Direct, Gap, 1X Amplitude, 1X<br>Phase Lag  |
| Circular<br>Acceptance<br>Region                                       | Direct, Gap, 1X Amplitude, 1X<br>Phase Lag, 1X Circular<br>Acceptance Radius, 2X<br>Amplitude, 2X Phase Lag, 2X<br>Circular Acceptance Radius                             |

## Compliance and Certifications

#### FCC

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

#### **EMC**

European Community Directive:

EMC Directive 2014/30/EU

Standards:

EN 61000-6-2 Immunity for Industrial Environments

EN 61000-6-4 Emissions for Industrial Environments

#### **Electrical Safety**

European Community Directive:

LV Directive 2014/35/EU

Standards:

EN 61010-1

#### **RoHS**

European Community Directive:

RoHS Directive 2011/65/EU

#### Maritime

ABS - Marine and Offshore Applications

DNV GL Rules for Classification – Ships, Offshore Units, and High Speed and Light Craft

## **Hazardous Area Approvals**

For the detailed listing of country and product specific approvals, refer to the *Approvals Quick Reference Guide* (108M1756) available from Bently.com.

| 08                       | 138700-01          | Shaft Absolute I/O Modules with external terminations   | Prox/Accel or Velomitor or<br>Seismorprobe   |
| 09                       | 140471-01          | Prox/Velom I/O Module with internal terminations  | Prox/Accel, Velomitor or HTVS  |
| 10                       | 140482-01          | Prox/Velom I/O Module with external terminations  | Prox/Accel, Velomitor or HTVS  |

External termination blocks cannot be used with Internal Termination I/O Modules. When ordering I/O modules with external terminations, order the external termination blocks and cable separately for each I/O module.

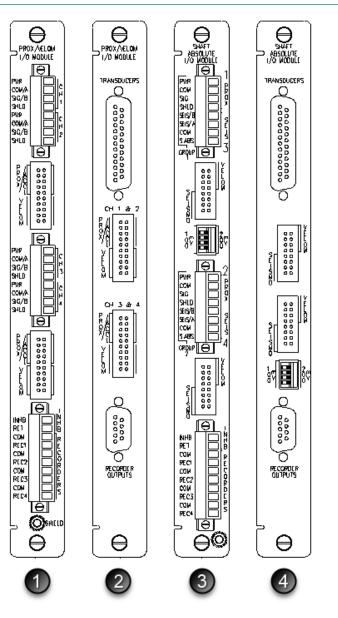

## **Graphs and Figures**

- 1. Status LEDs
- 2. Buffered Transducer Outputs
- Prox/Seismic I/O Module with Internal Terminations
  Prox/Seismic I/O Module with External Terminations

#### Figure 1: Front and Rear Views of 3500/42M Monitor

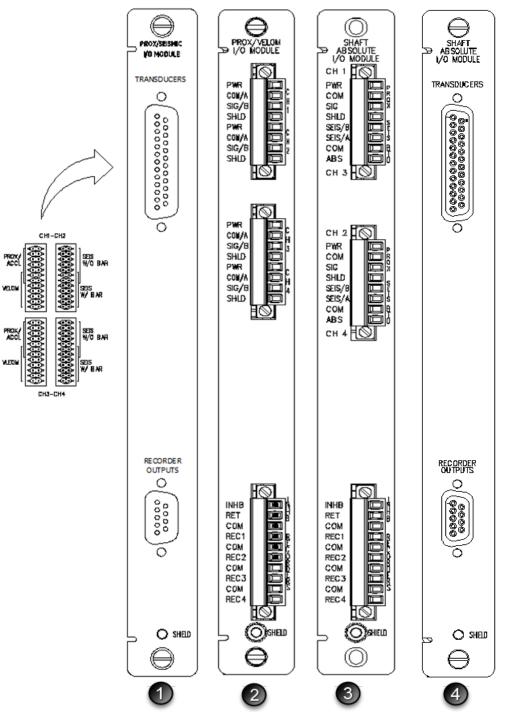

- 1. Prox/Velom I/O Module, Internal Terminations
- 2. Prox/Velom I/O Module, External Terminations
- 3. Shaft Absolute I/O Module, Internal Terminations
- 4. Shaft Absolute I/O Module, External Terminations

#### Figure 2: Additional I/O Modules for Legacy 3500/42M

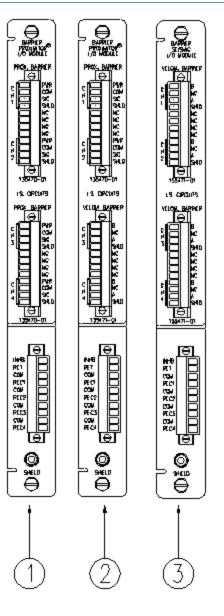

143694 Rev. V

Prox/Velom I/O modules and Shaft Absolute I/O modules with internal or external terminations have the same jumpers.

- 1. Barrier I/O Module for connecting four proximitor sensors
- 2. Barrier I/O Module for connecting four proximitor sensors and two velomitor sensor
- 3. Barrier I/O Module for connecting four velomitor sensors

#### Figure 4: Barrier I/O Modules of the 3500/42M Proximitor Seismic Monitor

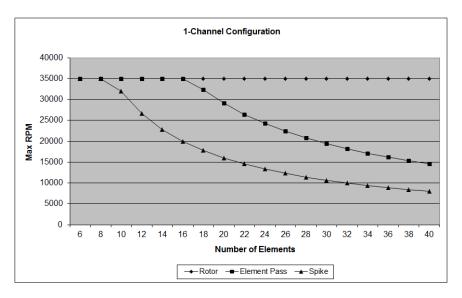

## **REBAM Channels**

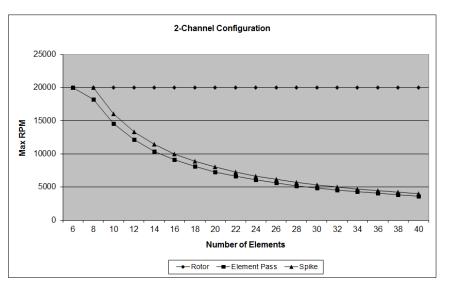

The following graphs show the maximum machine speed allowed for a monitor channel pair configured for REBAM. The maximum speed depends on the number of rolling elements in the bearing.

The graphs are generated with the following assumptions:

- The rotor lowpass filter corner is set at 3.2 times the shaft speed.
- The spike highpass filter corner is set at four times the element pass frequency for the outer race (BPFO).
